Corporate Profile

Laboratorios CONDA was founded in 1960 as the first Spanish producer of Dehydrated Culture Media for **Microbiology** and **Molecular Biology**. The company is now internationally recognized as one of the leaders in the field and supplies key ingredients for use in research and testing, such as Agars, Peptones and Agaroses, among other products. Our corporate mission is to be a major contributor to the field of Life Sciences through the design, production and provision of products and services of the highest quality and value.

CONDA's efforts are focused on becoming more efficient, responsive and competitive, in order to achieve our main aim which is to provide World Class Customer Satisfaction. From our factory located on the outskirts of Madrid, we export to more than 80 countries around the world, using our own branch offices and authorised distributors. Backed up with this great team of professionals, CONDA is confident in providing all of its customers with high quality products and services.

Our growing customer base includes:

- Research centers
- Public and private hospitals
- Universities and government institutions
- Clinical and veterinary diagnostic laboratories
- Pharmaceutical and cosmetic industries
- Food and agricultural industries
- Ready-to-use media manufacturers

Our Quality Commitment

CONDA continuously improves and increases its production to meet the highest international quality standards. The company complies with the

ISO 9001:2000 standard, and was the first Spanish company in this sector to be granted the certificate in 1998. Our products comply with various international standards such as ISO, the European Pharmacopoeia, FDA, APHA, USP and AOAC standards. CE (European Community) marking was achieved in January 2003.

Our Quality Procedures

Strict quality control procedures are adopted by CONDA prior to, during and after the manufacturing process to ensure quality products and batch-to-batch consistency. CONDA also exerts tight control over the selection and treatment of all raw materials and the various components (peptones, carbohydrates, minerals and chemicals, agar and other additives) used in the manufacturing process. We extensively source, select and test the best materials only for each application.

Physical-chemical characteristics are tested, such as appearance, color, odor, moisture, solubility, clarity, gelling, temperature and pH. The media also undergo additional microbiological tests that guarantee growth, differentiation, biochemical performance, recovery of small inocula, selectivity, etc. A quality certificate is always supplied with each product.

Our reputation and success throughout the world are the result of a combination of uncompromising quality systems, technical expertise and innovative thinking.
